

3G Fiber Transmission

3G Fiber Camera Transmission

The 3G Fiber transmission system for the LDK 8000 Elite and LDK 4000 Elite camera heads is the world's first Fiber system that delivers all HD video formats (720p, 1080i and 1080p) from the base station.

The 3G Fiber transmission solution from Grass Valley, a Belden Brand, consists of the LDK 5420 camera adapter and the LDK 4410 base station. This 3rd generation fiber solution is a non-compromise, fully featured solution that can cope with the broadcast requirements of today and tomorrow.

The 3G Fiber transmission system is a heavy duty, high-quality, multistandard, full-bandwidth transmission system with new and specially developed highly advanced technologies that is fully 3G and 3D ready and supports current 1080i50/60 and 720p50/60 formats as well as 1080p50/60 transmission from the LDK 8000 Elite WorldCam.

The 3G Fiber system is extremely powerful where long cable runs are needed. With SMPTE hybrid cable, cable runs up to 3,000m (9,842 ft.) can be reached. When "dark fiber" is used, cable length can go over 10 km (30,000 ft.)

LDK 4410 Base Station

The LDK 4410 base station offers extended connectivity with no less than eight HD outputs, of which six single link HD-SDI outputs (1.5 Gb / 3 Gb switchable) and two 1.5 Gb HD-SDI outputs, which automatically convert the signal in 1080i when the camera head is delivering 1080p. In addition, three HD return connections are incorporated, of which two can be selected as a return channel by the adapter.

Additionally, the audio connectivity offers great versatility with two analog outputs and two (digital) AES/

EBU pair outputs (2 x 2-channels) which are also embedded in the HD-SDI outputs.

With a compact design of only 2 RU and weighing in at only 13.0 kg (28.66 lbs.), the LDK 4410 base station takes up minimal rack space. When combined with its low power consumption and efficient internal cooling that eliminates the need for space between adjacent units, the LDK 4410 base station is ideal for implementation in OB vans.

RefleX SuperXpander

To coincide with the introduction of the new 3G Transmission system, Grass Valley has developed a new large lens adapter — the RefleX SuperXpander.

As part of the RefleX SuperXpander, a new convenient hot shoe connection to the camera is implemented which directly powers the SuperXpander from the camera. This makes the new RefleX SuperXpander seamlessly compatible with the new 3G Fiber camera adapter.

Once the camera is inserted in the RefleX SuperXpander, the hybrid-fiber cable can be connected to the camera and all interfacing with the RefleX SuperXpander takes place through the hot shoe connector. This makes the RefleX SuperXpander transmission agnostic, which means that the RefleX SuperXpander can work with both the 3G Fiber and 3G Triax systems without any additional equipment for true flexibility.
