

## Virus Notice

Like any PC system the PC component of this Platform is susceptible to computer viruses. Therefore care must be taken to prevent infection by any computer virus.

SAM takes every precaution to ensure that all equipment delivered directly to Customers is free from any virus or other infection. SAM cannot, however, guarantee that this equipment is virus free if it has been used by any third party prior to installation or if this is a Demonstration or Loan unit.

It is strongly recommend that this PC is scanned for viruses (in accordance with your organisation's antivirus policies and procedures) before connecting it into any network.

No antivirus software is installed on this product as it is intended that the PC be connected to a private network and therefore protected from the threat of computer viruses that may occur via the network connection.

Any CD-ROM/DVD-ROM inserted into the Platform should be virus checked first or have been produced in a known virus-free environment.

Care must be taken when using USB pen drives, USB hard drives or firewire drives to transfer material between systems to avoid introducing viruses on to them. USB and firewire devices should, like any other remove able media, be scanned routinely for viruses.

The running of antivirus software on the PC may, under certain conditions, adversely affect operational performance of the platform.

SAM cannot accept any responsibility for any virus infection on the Platform if proper care is not taken to protect against it.

If you have any questions or concerns regarding virus protection or infections on SAM products please contact:
