## Terms and Conditions

Please read the following terms and conditions carefully. By using Kula documentation, you agree to the following terms and conditions.

Grass Valley hereby grants permission and license to owners of Kula to use their product manuals for their own internal business use. Manuals for Grass Valley products may not be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, for any purpose unless specifically authorized in writing by Grass Valley.

A Grass Valley manual may have been revised to reflect changes made to the product during its manufacturing life. Thus, different versions of a manual may exist for any given product. Care should be taken to ensure that one obtains the proper manual version for a specific product serial number.

Information in this document is subject to change without notice and does not represent a commitment on the part of Grass Valley.

Warranty information is available from the Legal Terms and Conditions section of Grass Valley's website ([www.grassvalley.com](http://www.grassvalley.com)).

# Kula Release Notes

The *Kula Release Notes* includes lists of new features and enhancements, bug fixes, as well as known issues and limitations associated with the latest version of the Kula software.

## Overview

Kula Software Version 6.5 Release 3 is a major release that adds many new features to Kula. This release also includes bug fixes that were resolved to improve the product.

## Applicability

Kula Software Version 6.5 Release 3 applies to the following products:

- Kula
- Kula-IP
- Kula-12G
- Kula-AV

## New Features, Enhancements, and Bugs Fixed

### Kula 6.5 Release 3

#### New Features and Enhancements

- ★ Support added for ELO 1502L-2UWC-1-G Touch Screen
- ★ Kula output names can now be read by NMOS devices.
- ★ If a Panel has previously been running Kahuna or Masterpiece software, a new system now added on logged-off Menu 08 allows switching between different products or the previous version of Kula software. (Note: if a previous version does not have this feature you will not be able to change back.)
- ★ Visca control menus can now set the Video Standard of GRASS VALLEY PTZ 35X HD cameras.
- ★ MAV fader modules can now be used on a Panel in AMPP control mode.

#### Bugs Fixed

- ★ In certain circumstances users could experience a problem logging in due to spurious "Upgrade in Progress" message.
- ★ Macro Cache not working and deleting a Macro and then re-creating a new file would lose the attachment on a panel.

- ★ On a MAV panel if network connection needed to failover to a redundant ethernet connection, the panel could lose the Gateway.
- ★ Unable to change Button Color settings from external GUI on a MAV panel.

## Kula 6.5 Release 2

### New Features and Enhancements

- Multiple audio channel support added to Kula IP allowing spigots to be configured in either 1x16 channels, 2x8 channels or 4x4 channels. Spigots in 2 or 4 flow mode can subscribe to more than one audio sender. Input and Output channels can be shuffled in any order on each spigot.
- Automatic failover when NMOS enabled on primary and secondary media ports.
- MSP now creates unique Panel name based on PC and User names. It is still possible to rename an MSP panel (logged off menu 02) and MSP panels which have already been given a name will retain their names.
- Individual memory recall buttons added to Visca Camera Control Menu.
- Panel Joystick "MEM" buttons can now be copied and pasted onto panel buttons and they retain the current Joystick attachment when the paste is made. This allows you to copy several different Joystick attachments onto different panel buttons. These attachments can be turned on and off so that when unlit, the GUI selection is attached to the Joystick.

### Bugs Fixed

- ST-352 payload not forwarded on IP sources.
- IP Aux panels could fail to load Macro and Clone attachments when logging in.
- Some IP Aux panels failed to upgrade with a Panel upgrade.

## Kula 6.5 Release 1

### New Features and Enhancements

- K-Manager Pro now supports Backup and Restore.
- The panel's Log Off button location can now be configured from menu 8731 so that it can be present in the Home menu (1) tree or only in the Defaults menu (80). This setting is stored locally within the panel and then applied to any mainframe the panel logs into.
- Improvements to Visca camera control menus makes it easier to control Multi Visca Camera setups, plus more control over the camera parameters.
- When controlling a Kula using a Maverik Panel, the panel GUI now incorporates the Func Pad feature.
- Default Gateway was added to Panels.
- MSP now allows Macro and Clone attachment to crosspoint busses on the virtual panel.

### **Bugs Fixed**

- Resolved an issue that could cause the RTC battery to drain faster than expected with the updated version of the RTC chip.
- Buttons Maps cleared and User Function attachments lost when making MAV layout changes.
- Panel Link Latency control not now saved in Panel Config.
- Button Info functionality not working on MSP.
- Clones & Macro attachments on IP Aux Panels sometimes fail to reload.

### **Known Issues and Limitations**

The following is a list of known issues and limitations associated with Kula 6.5 Release 3.

- None.

## **Grass Valley Technical Support**

For technical assistance, contact our international support center, at 1-800-547-8949 (US and Canada) or +1 530 478 4148.

To obtain a local phone number for the support center nearest you, please consult the Contact Us section of Grass Valley's website ([www.grassvalley.com](http://www.grassvalley.com)).

An online form for e-mail contact is also available from the website.
