New Features of Version 3.3.0.1579

This update provides the following additional features:

- Support to display 60 / 50p timecode
- Support to playback growing clip that is being ingested by another T2 4K
- Support Fill/Key playback mode for 4K clip – only for T2 4K Plus series
- Movie file import support via FTP
- Support to export growing clip to connected XDCAM drive
- Support native playback of DNxHR MXF clip
- Support file conversion from 4K GrassValley HQX AVI to DNxHR MXF

Update History

This Service Pack fixes/improves the following issues:

- T2 does not display DCI-4K footage with 1:1 pixel aspect ratio
- T2 creates still image that has different color tone to original clip
- T2 doesn't set playlist event in correct frame rate if loaded clip's format is different to playout channel
- T2 does not set In point margin in VTR mode if In point is all zero timecode
- If both TC chase and file transcode are working, restart/shutdown T2 or switching I/O mode doesn't work
- T2 freezes while operating shuttle/VAR on synchronized playback mode
- Output audio may be unsynchronized once no output channel configured in ASIO device configuration
- Video ingest doesn't work if previous ingest is force cancelled
- T2 logs 'Delay Detect' while playing growing ProRes clip
- T2 does not register DNxHD 36 growing clip into the Bin
- T2 does not reset Playback remote status if I/O mode is switched
- T2 crashes if shutdown or restart is operated while running in synchronized playback mode
- Field mark that indicates displaying upper field footage appears even when stopping playback at lower field position
- Pass through does not work on EtoE / R1 monitor output when inputting SDI Level B signal
- Sony Content Browser rejects XDCAM HD 35M clip created by T2 4K (SFDC00730462)
- Player displays same timecode for two frames if a clip is loaded to player that different frame rate configured
- Pinned markers always based on zero start TC if clip's frame rate or scan type is different to player configuration
- Cue up point shifts toward 1 frame forward in VTR mode if T2 runs in front panel mode
- Fixed length ingest does not stop if In Out pinned capture ran just before
- Sync playback is unable to be turned off even though "Enable local operations while being remote controlled" is being enabled
- T2 does not preserve modified ASIO device configuration
